  - Integration
- Led by a Board of Directors with a over 2 decades combined experience in Management, Telecoms, Finance, Information Technology and Customer Relations Management.

About NiPEP

NIPEP
Nigeria Integrated Politically Exposed Persons

A cloud-based RESTful API Web Service For Politically Exposed Persons (PEP) of Nigerian Nationality locally and in the diaspora

- A consolidated database of Nigerian Politically Exposed Persons (PEP)
- Sourced from PEP lists created by various financial institutions operational in Nigeria
- Aggregated into a single managed database
- Organized into a structured information system
- Maintained – regularly updated by a dedicated team
- Cloud-based – easily accessible via Web
- Exposed as a RESTful API web service

Background Problem Scope

NIPEP
Nigeria Integrated Politically Exposed Persons

No consolidated, regularly updated PEP list solely focused on Nigerians

- Every bank/financial institution has its own PEP list largely sourced from its limited customer data
- Individual PEP list mostly stored in spreadsheet/ flat files (and could get lost)
- Keeping individual PEP list updated can be cumbersome and time-consuming
- KYC/Due-diligence for new customers dependent on inefficiently updated PEP list and therefore can potentially expose the bank to high risk
- Banks currently rely on PEP list from International providers which is usually not up-to-date

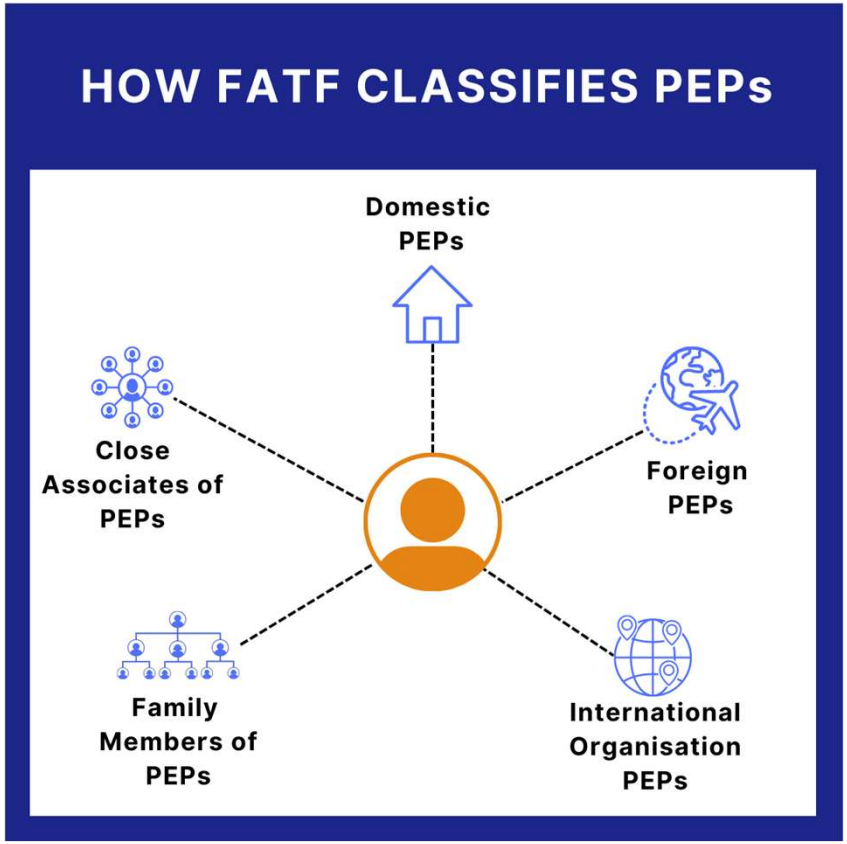

Why NIPEP

NIPEP
Nigeria Integrated Politically Exposed Persons

PEPlist–Platform–as–a–Service (PPaaS)

- Implements an efficient and regularly updated PEP list of Nigerians home and abroad
- Greater observability for Domestic PEP in compliance with FATF Recommendations
- Absolves the banks/OFIs the burden of maintaining their own PEP list
- Enhance due–diligence/KYC exercise relying on up–to–date PEP list
- Eliminates overhead cost banks/OFI incur from infrastructure and man–power in order to maintain a PEP list

Why NIPEP

NIPEP
Nigeria Integrated Politically Exposed Persons

Ensuring Nigeria Is Fully Compliant With Global Standards

FATF's 3 Types of PEP?

Foreign PEPs

Individuals entrusted with prominent public functions by a foreign country, such as;

- Heads of State or government
- Senior politicians
- Senior government, judicial or military officials
- Senior executives of state-owned corporations
- Major political party officials.

Domestic PEPs

Individuals entrusted domestically with prominent public functions, such as;

- Heads of State or government
- Senior politicians
- Senior government, judicial or military officials
- Senior executives of state-owned corporations
- Major political party officials.

International Organization PEPs

- Individuals entrusted with a prominent function by an international organization refer to members of senior management.
- Individuals entrusted with equivalent functions, i.e., directors, deputy directors, and members of the board or equivalent functions.

Maintaining a robust Nigeria PEP list is critical in ensuring Nigerian financial institutions remain compliant with global standards

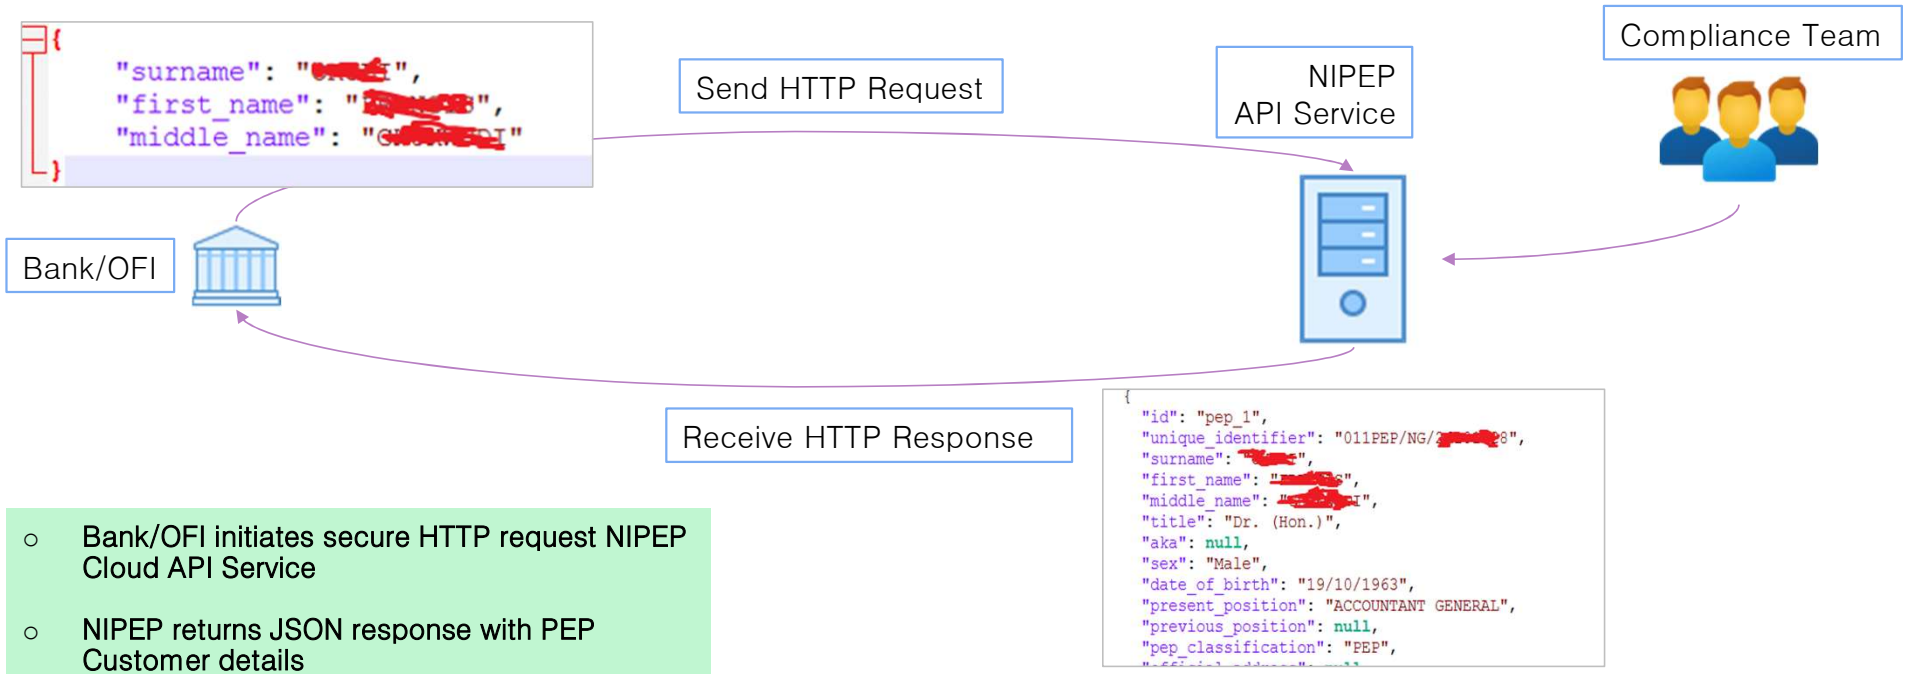

Inspiring greater confidence amongst the global financial community.

Increase the reputational value of Nigerian banks/OFI

Minimize expose to higher risk

Enhance the KYC/Due–diligence process

System Architecture

- Bank/OFI initiates secure HTTP request NIPEP Cloud API Service
- NIPEP returns JSON response with PEP Customer details
- Dedicated Compliance Team keeps database updated daily

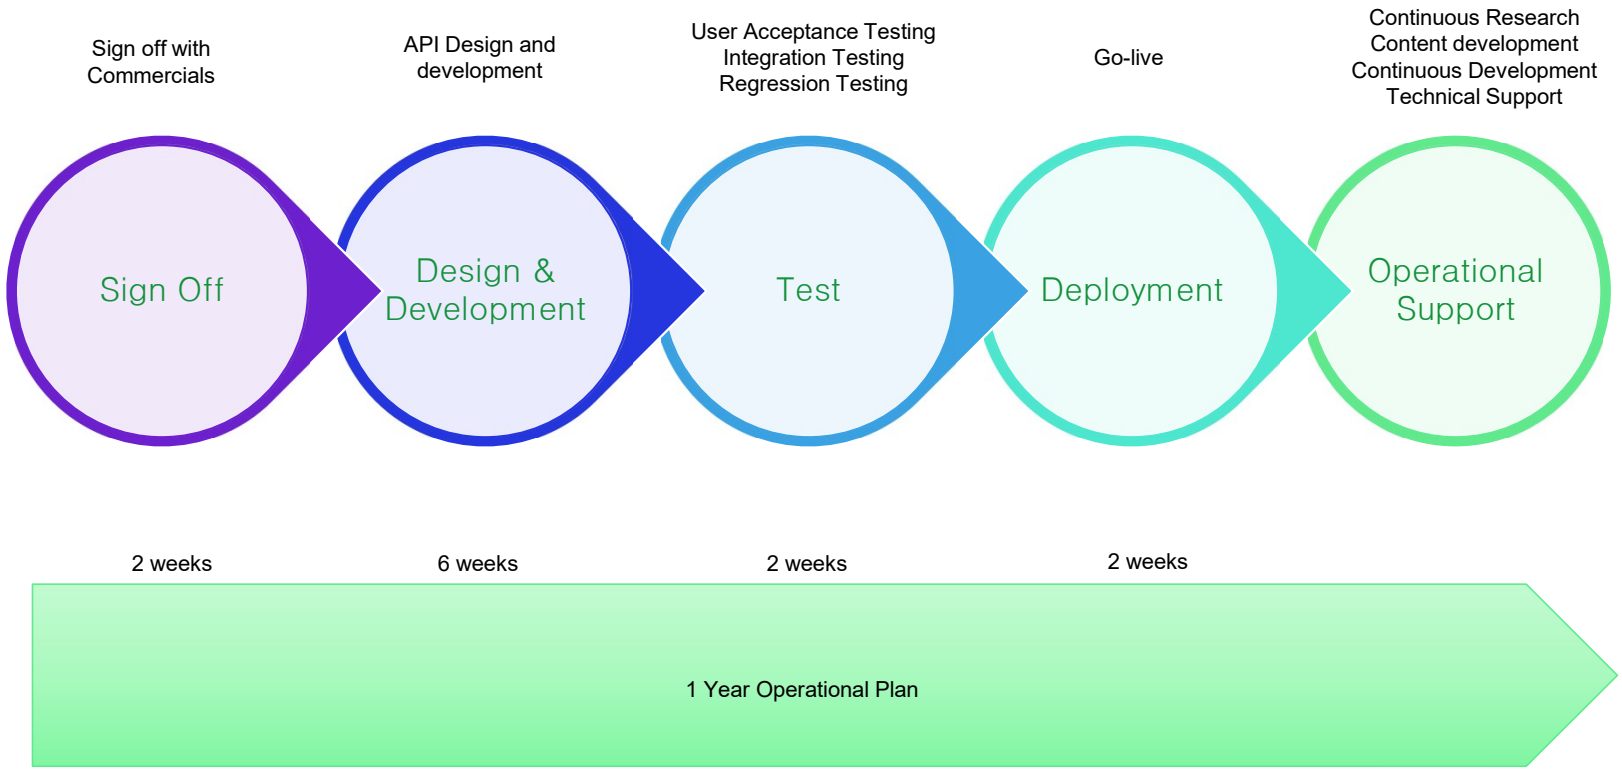

Security Design

NIPEP
Nigeria Integrated Politically Exposed Persons

S/N	Feature	Description
1	Password Encryption	All password encrypted with SHA-1 with Salt algorithm
2	2-Factor Authentication	2fa using Google or Microsoft Authenticator app Also use SMS optionally
3	Session State Protection	Session State Protection is a built-in functionality that prevents hackers from tampering with the URLs within the application
4	SSL/HTTPS	Secure Sockets Layer (SSL) certificates, sometimes called digital certificates, are used to establish an encrypted connection between a browser or user's computer and a server or website
5	Active Directory Authentication	Active Directory Authentication is a Windows-based system that verifies users, endpoints, and services to Microsoft's Active Directory. AD Authentication supports both Kerberos and the Lightweight Directory Access Protocol (LDAP)
6	Page and Field Level Security	sets the page item's Store value encrypted in session state.
7	Access Control	An access control list (ACL) is made up of rules that either allow access to a computer environment or deny it
8	JWT Token	API access provided via Java-Web Token authentication

Implementation Plan
